Airspace control. A process used to increase combat effectiveness by promoting the safe, efficient, and flexible use of airspace. Airspace control is provided in order to reduce the risk of friendly fire, enhance air defense operations, and permit greater flexibility of operations. Airspace control does not infringe on the authority vested in commanders to approve, disapprove, or deny combat operations.
Camber 4 member mapping team developed 147 Strategic/Operational Template tasks sets, to include definitions for each template.

Humanitarian Assistance – The ability to support those programs conducted to relieve or reduce the results of natural or manmade disasters (to include war) or other endemic conditions such as human pain, disease, hunger, or privation that might present a serious threat to life or that can result in great damage to or loss of property. Foreign humanitarian assistance (FHA) provided by US forces is limited in scope and duration. The foreign assistance provided is designed to supplement or complement the efforts of the host nation civil authorities or agencies that may have the primary responsibility for providing humanitarian assistance. FHA operations are those conducted outside the United States, its territories, and possessions.
